

the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion, and the number of people aged 65 and over has increased from 0.2 billion to 0.5 billion (United Nations 1999). The United Nations (1999) has projected that by the year 2025, the number of people under 15 years of age will be 1.6 billion, and the number of people aged 65 and over will be 1.1 billion. The United Nations (1999) has also projected that the number of people aged 65 and over will increase more rapidly than the number of people under 15 years of age, and that the number of people aged 65 and over will exceed the number of people under 15 years of age by the year 2025. This is a significant demographic change, and it has important implications for the world's population.

The United Nations (1999) has also projected that the number of people aged 65 and over will increase more rapidly than the number of people under 15 years of age, and that the number of people aged 65 and over will exceed the number of people under 15 years of age by the year 2025. This is a significant demographic change, and it has important implications for the world's population. The United Nations (1999) has also projected that the number of people aged 65 and over will increase more rapidly than the number of people under 15 years of age, and that the number of people aged 65 and over will exceed the number of people under 15 years of age by the year 2025. This is a significant demographic change, and it has important implications for the world's population.
